

SECURE360°

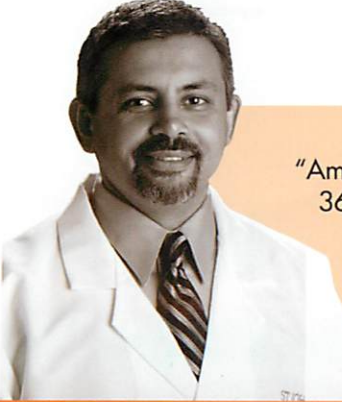

PEDIATRIC PRONE POSITIONER

Secure360 Pediatric Prone Positioner is indicated for use during surgery for proper positioning of infants in the prone position while maintaining maximal visualization of the skull. It is designed to provide rapid, safe and stable prone positioning while specifically protecting the infant's eyes, neck, chest and extremities. Secure360 is intended for use with pediatric patients, specifically infants 6–18 months of age.

BENEFITS

- Provides 360 degree access and visualization of the infant's skull
- Provides stable, reliable support throughout surgery
- Significantly reduces patient positioning time
- No need to reposition child during surgery

"Among the many benefits, I am especially pleased with the dramatic reduction in prep time and the full 360 degree visualization of the skull that the Secure360 delivers in the surgical setting."

Dr. Bharat Shah, MD FACS and inventor of the Secure360

FEATURES & OVERVIEW

Specifically designed for use during cranial reconstruction surgeries, the Secure360 Pediatric Prone Positioner reduces patient positioning time while providing stable support throughout surgery. Allowing 360 degree access and visualization of the infant's skull, Secure360 can be used on male or female infants, ages 6-18 months.

 Earth-Cell™ is a bio-based foam, an environmentally friendly alternative to petroleum based polyurethane foams

Breathing Cavity

Chest cavity allows infant to breathe normally without unnecessary pressure on sternum and rib cage

Chin Cradle

Chin cradle properly supports head and neck and provides unrestricted access to endotracheal tube

Secure Strapping

Straps secure the device to the positioner to prevent movement during procedure

Earth Cell™ Foam Base

Earth Cell™ foam base is comfortably soft yet still supportive

Catheter Housing and Trough

Built-in catheter housing and trough for infant males

EZ-Peel Straps

All straps feature EZ-Peel tabs for quick release if needed

Adjustable Buttock Strap

Adjustable buttock strap prevents sliding and keeps infant in proper position
